

NVT-500

Handheld video endoscope

The **Novatest NVT-500 endoscope** is our inspection camera with a 1280x720p 5-inch HD tempered glass screen that's rated to **IP67 waterproofness** and includes a 3500mAh lithium-ion rechargeable battery.

This is a premium inspection camera for mechanical inspection, car repair, plumbing fixes, electrical installs, house DIY, wall upgrades, HVAC maintenance, and more. It is ideal for conducting non-invasive inspections of small areas, like looking in the combustion chamber of an engine through the spark plug hole or the inside of a wall without damaging the drywall.

This endoscope is very easy to use and records JPEG images and MPEG-4 videos to the included, 32 GB Micro-SD card with the push of a button. Wi-Fi connections and downloading software are NOT required – this is a stand-alone device. The monitor also features a LED light for illuminating your workspace and a microphone to record sound to video, which is very handy for making notes during an inspection.

This video borescope also includes a durable storage box and several accessories – magnets, side-view mirrors, and hooks, to help you see better or retrieve items lost in hard-to-reach places.

Technical features::
