

MONITORING DATA MANAGER

Web platform for the management of multi-parameter monitoring systems.

AVAILABLE INFORMATION:

- Reading of parameters from various types of sensors (displacement transducers, inclinometers, piezometers, temperature sensors, environmental measurements, etc.);
- Visualization and queries on the graphical trend of the measurements;
- Event storage;
- Setting of alarm thresholds;
- Sending of alarms via SMS or email;
- Data export in various formats.

APPLICATIONS:

- Structural and geotechnical monitoring;
- Monitoring of landslides;
- Water monitoring (surface and underground).

Compatible with GPRS data acquisition unit and NB-IoT data transfer modules.
